U.S. Department of Transportation
Federal Highway Administration

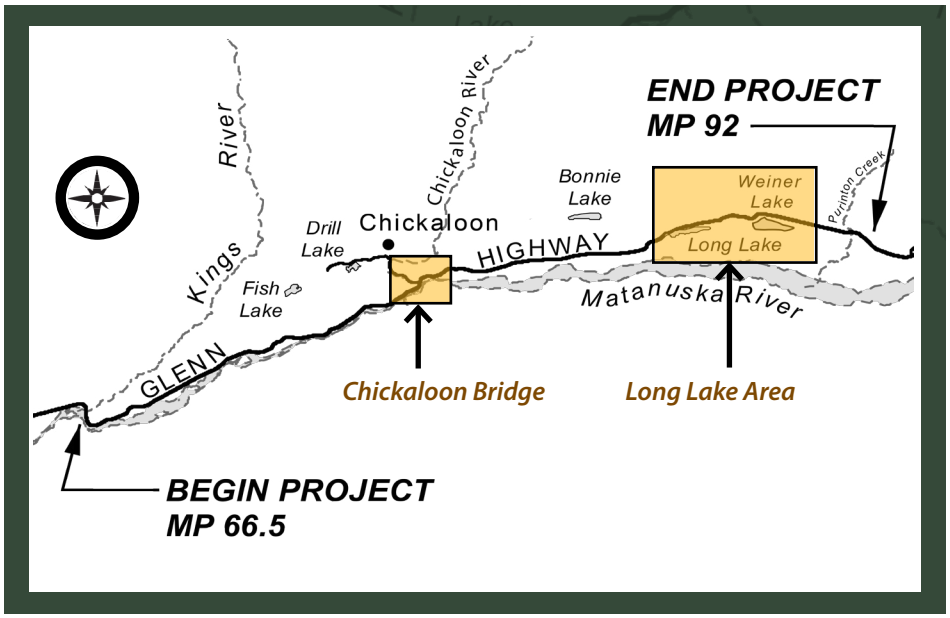
Glenn Highway Rehabilitation Project MP 66.5-92

Project Fact Sheet

Spring 2014

Project Overview

The Western Federal Lands Highway Division of the Federal Highway Administration (FHWA), in partnership with the Alaska Department of Transportation and Public Facilities (ADOT&PF), is planning to rehabilitate 22.5 miles of the Glenn Highway, from Kings River Bridge (MP 66.5) to Cascade (MP 92). As a part of this project, ADOT&PF and FHWA plan to replace the Chickaloon Bridge and are examining options for the Long Lake area.



Purpose and Need

The purpose of this project is to enhance the safety of the highway and accommodate the anticipated traffic for the next 20 years.

This rehabilitation project will:

- Preserve and extend the service life of the highway
- Provide climbing lanes
- Enhance safety
- Provide rock fall mitigation

Environmental Review

As a part of this project's ongoing National Environmental Policy Act environmental review process, FHWA is re-evaluating the MP 66.5-92 and the Chickaloon Bridge sections of the 1993 Glenn Highway Parks MP 35 to MP 109 Environmental Assessment.

Chickaloon Bridge

The Chickaloon Bridge is a priority due to low structural ratings of the deck and railing. Repair costs for the bridge are high, and the lifespan of the repairs would be limited. Replacing the bridge now will cost less in total than repairing the bridge and then replacing it in the near future.

Project Schedule
