Project News

JUNE 6, 2016

Our biggest pre-shear rock cut will be blasted today at IPM. The rock cut is on project right from station 72+00 to 77+00. Heavy rains toward the end of last week and into the weekend were handled by storm water BMPs on-site, including sediment wattles, check dams and recently installed silt fence where the road parallels a fish creek.

Notes

- Pictured above is the drilling that has been taking place this past week for the pre-shear blast this afternoon.
- Waste material will be hauled to the disposal site all week.
- Please use caution when driving through the project as the site will change day to day.
