## Project News

JULY 11, 2016

The Naukati Road will be following the pilot car schedule the entire week as rock hauling and placement get underway again. Last weeks drilling and blasting has made rock available to place. Drilling and blasting will continue this week as well as compaction efforts for embankment.

## Notes

- Pictured above is the rock generation from blasting. The CAT 345D excavator is pushing the usable rock down the slope for ease of loading into the haul trucks. Drilling will remain underway in this area.
- Please use caution when driving through the project as the site will change day to day.
