

# Rock Creek Culvert

## Last Week:

Ahtna Environmental, Inc. continued working on their traffic detour through the North side of the project, next to the mainline bridge. They continued working on the temporary pedestrian trail, and began hauling in embankment material for the traffic detour and to level an area to start on the mainline bridge removal.

## This Week:

This week Ahtna will complete the traffic detour and divert traffic off of the mainline bridge. They will install a debris shield for the traffic detour and start on the mainline bridge removal.
