

Rock Creek Culvert

Last Week:

Ahtna Environmental, Inc. started work for the 2014 construction season on Monday, May 5, 2014 and began by setting up their traffic control and erosion control devices. They began establishing their pedestrian trail through the North side of the project, and began excavating on the North side of Rock Creek Bridge for the traffic detour. Baseline testing was performed on fiber optic cable by their subcontractor, Integrity Network.

Above: Preparing Pedestrian Trail

This Week:

This week Ahtna will first divert traffic into the South lane over Rock Creek Bridge and complete their traffic detour from the North lane over the North MSE Walls. Once the pedestrian trail is completed and traffic is diverted, they will start preparing for the mainline bridge removal.
