How to...  
Check who has Access to the Project

• Sometimes you need to see who has access to your project and what roles they have been assigned.
• Based on the role assigned, will depend on how much information they have access to.
This will allow you to see who has access and what role they are assigned.
You can also see who was on the project but no longer on the project.
If you want someone added to the project, let the Project Engineer know. The Project Engineer will let the Final Review Engineer know. Make sure the EEBACS Delegation of Authority (WFLHD 299) form is filled out and submitted with your request.
