1. Install underdrain at a 5' depth unless shown otherwise. Construct the flowline gradient parallel to the roadway, unless solid rock is encountered, or gradient is required at the outlet.
2. Use the minimum width required for installation.
3. Fill and compact the top 12" of the trench with impermeable material (A4 - A7 soil).
4. Cover the end of the outlet pipe with screen according to Subsection 615.03. Hold the screen securely in place with standard coupling bands or by other approved means.
5. Mark the outlet of the underdrain with a delineator post or other suitable marker.
6. Furnish geocomposite sheet drain meeting requirements of subsection 714.02.
7. Furnish collector pipe, outlet pipe & fittings meeting the requirements of subsection 714.04.
8. Furnish geotextile filter type conforming to subsection 714.01(a). See summary tables for class and type.
