HOOK BOLT DETAIL

TYPICAL HALF PLAN

NOTE:

- Concrete conforms to Section 601. Pour concrete monolithically. Chamfer all exposed edges 3/4" and finish all exposed surfaces with a Class 1 ordinary finish.
- Clearance for reinforcing steel is 2" unless otherwise noted.
- Headwall dimension "H" may be reduced in solid rock provided the wall is keyed into the rock at least 1 foot. Excavate and backfill according to Section 209.
- Set hook bolts on nominal 18" centers around pipe pipe perimeter at center of headwall. Hook bolts conform to ASTM A307. Galvanize according to ASTM A153.
- For installations with more than two pipe culverts, increase the dimension "L" and all quantities shown for double pipe installation by adding a length equal to dimension "B" and the incremental change in quantities for each additional pipe culvert.
- For skews other than those shown, multiply quantities and dimensions "A", "B" & "L" for square headwalls by secant of the skew angle.
- Final quantities will be determined by using the tables on this standard.
- Do not order materials until the length, skew angle, and slope bevel in the field have been approved.
