WINGWALL	PIPE SKEW			
	0°	15°	30°	45°
①	45°	45°	60°	60°
②	45°	30°	15°	0°
③	45°	30°	15°	0°
④	45°	45°	60°	60°

NOTE:

- Concrete conforms to Section 601. Chamfer all exposed edges 20 mm and finish all exposed surfaces with a Class 1 ordinary finish.
- Reinforcing steel clearance is 50 mm unless otherwise noted.
- For skew angles shown in table, the length W and quantities for wingwalls are computed for a 1V:1.5H side slope. For 1V:2H or 1V:2.5H slopes compute length W with the following equation:
 $W = D/2 \times \text{slope} \times \text{secant (wingwall skew angle)}$
 Minimum W not less than 1.8 meters.
- Quantities shown in table are for one wingwall only. For lengths W not shown in table, approximate the quantities by multiplying the quantities for 0° skew and a given height H by the factor: $1 + [(W-1.8) \times 0.46]$.
- See Standards M601-1 and M601-2 for headwall and slope paving dimensions.
- Final quantities will be determined by using the tables on this standard.
- Do not order materials until the length, skew angle, and slope bevel in the field have been approved.
- Dimensions without units are millimeters.
