INSTALLATION PROCEDURES:
Install Rolled Erosion Control Product (RECP) along the slopes as follows:

Step 1: Grade, smooth, and compact slope. Remove rocks, trash, and other material which will prevent the RECP from laying flush with the ground. Do not track slope face.

Step 2: Unroll and lay RECP out down slope face (in the direction of flow). Anchor at top of slope. Do not stretch RECP.

Step 3: Secure RECP with wood or metal fasteners. See Detail A.

Step 4: Apply seed and fertilizer as recommended by the manufacturer.

SLOPE STABILIZATION WITH RECP

SECTION A-A
EROSION STOP (CHECK SLOT)

TYPICAL GROUND FASTENERS

- Wood Stakes
- 1" X 3" thick cut into triangular shape
- Typical staples
- No. 11 gauge wire
- Backfill with soil and tamp
- 6" deep x 6" wide transverse trench at 50' intervals (up slope face)
