NOTE:

1. Dimensions not labeled are in millimeters.

2. Manufacture gates of galvanized steel pipe not less than 75 mm nominal diameter (nominal mass 0.18 kg per linear meter) for frame and vertical braces. For each gate, provide two upright braces of the same material as the frame, spaced at 1/3 points in the gate. Place steel wire fencing, conforming to design no. ICY-1795, in AASHTO M 279 on the face of the gate. Equip each gate with adjustable 9.5 mm diameter diagonal truss rods from corner to corner. Provide hinges and 3-way self closing latch of an approved rust proof malleable iron or steel.

3. Where a single opening requires two gates, provide an approved drop bar and fasteners between the gates. Where two metal gates are installed in a single opening both gates will be measured for payment.

4. Approved alternate gates may be used.
